

INDOOR SKATING RINK AT MEYRIN

photos: Thomas Jantscher - 1077

The outdoor skating rink gives Meyrin a mountain resort feel during the winter weekends. The indoor skating rink next door allows continuous skating to be enjoyed until the beginning of March.

While remaining simple and economical, the project embodies the typical character of a piece of public infrastructure. The construction is designed for excellent functional and energy performance: water consumption, heating and cooling production, ventilation, natural and artificial lighting. The project was completed as part of a total professional services contract with a cost guarantee.

CLIENT
Municipality of Meyrin
