NEW KBA-NOTASYS FACTORY IN LAUSANNE

KBA-NotaSys is the world's leading supplier of printing machines for complex and tamper-proof products. In particular, the company is the market leader for the design, control systems and printing tools of banknotes. The building integrates, in a square plan, the site's three main activities. The upper part houses the administrative department with 150 work places and the lower part houses the press and pre-press areas. The project was based on a design-to-cost, fixed-price approach, the aim of which was to comply with a set of specifications, a guiding concept and a cap on costs.
