CHATEAU-D'EAU SCHOOL IN MARLY

To respond to the growth of the commune, a new primary school center will be created on the Château-d'Eau site. The school is organized as three buildings with a program of accommodation that includes 28 rooms, a multi-purpose room, extracurricular facilities and a double gymnasium. The prefabricated modular wood construction has a warm appearance. The objective is a construction that is simple, efficient, and sustainable, compliant with the Minergie P-ECO label.
