VERNET SCHOOL IN GENEVA

The area of the Caserne des Vernets is the first phase of the major Praille-Acacias-Vernets urban densification project.

At the heart of this high-density district the school's low volume, crossed by a public pedestrian passage, is distinguished by its sawtooth roof reminiscent of a workshop. The program of accommodation includes 21 rooms, a school restaurant, after school facilities, a dance studio and a gymnastics hall. The building meets the high sustainable design and energy performance standards of the City of Geneva.
