

PLAZA COLOMBO CENTER IN LAUSANNE

views: Galletti & Matter - 1222

Built in the late 1950s, this building complex marked the first phase of the modern urban edge of the Place de la Gare. The southern facade, displaying industrial craftsmanship, is entirely made of aluminium. The project proposes a complete reorganization of its existing commercial, office and residential surfaces while preserving its historic features. The refurbishment of the Plaza Colombo center will be carried out in coordination with the proposed extension works to the adjacent CFF train station and associated new metro stop for the m2 and m3 lines under the Place de la Gare.
