RENENS RAILWAY STATION, WALKWAY, URBAN SPACES

This urban project which required the technical and financial cooperation between the Canton, several municipalities, the Lausanne public transport authorities and various Swiss railway entities illustrates the complexity of leading a construction project of this kind. Although modest in cost, the new exchange platform comprises five work phases and two interrelated projects. Completing the re-development of the railway platforms, the new walkway over the railway lines connects Chavannes station, terminus of metro line 1, to Renens station, terminus of the first stage of the western Lausanne tramway.

CLIENT
Municipalities of Renens,
Crissier, Ecublens,
Chavannes-près-Renens

ARCHITECT
farra zouboulakis & associés,
