## SPORTS CENTRE AND SWIMMING POOL IN ROMONT

With its compact and functional morphology, the new sports center completes the facilities at the secondary school at Glâne. The interplay of the concrete slats and wooden slabs allows the height above the four principal pools and diving pool to vary in order to accommodate an additional floor level, which includes gym and dance facilities, in addition to music studios for the Conservatory. Large windows afford generous views of the old town, the Alpine foothills and the grounds.
